EPA is committed to working closely with response agencies and state and local officials to ensure the safety of citizens, respond to concerns and to evaluate impact to water contaminated by the Gold King Mine Release. EPA is sharing information as quickly as possible with the public as experts work to evaluate any effects the spill may have on drinking water, public health, agriculture, fish and wildlife. Please see our website for the latest information: <http://www2.epa.gov/region8/gold-king-mine-release-emergency-response>
Regular updates will be posted as they are available.

Comments: I grew up in Silverton. I also worked at the Sunnyside mine, both during production and during reclamation. You need to be careful with hydraulic seals on mines. After the Red Bonita is sealed, ground will return to the iron bogs below. This will be very detrimental to water quality. The San Juans are the most naturally polluted area in America. You will waste taxpayer money and gain nothing.
